SATHIYANARAYANAN P

Junior Python Backend Developer | Django | MySQL | REST API | ECE Graduate

+91 6382011909 | sathiyanarayanan3177@gmail.com | LinkedIn | GitHub | Coimbatore, TamilNadu

PROFESSIONAL SUMMARY

Electronics and Communication Engineering graduate with 1+ year of hands-on experience in system validation and industrial automation at Cogent Automation Pvt. Ltd. Completed a professional backend development course at Besant Technologies covering Python, Django, MySQL, REST APIs, and GUI development with Tkinter. Built real-world projects including a Real-Time Translation App and IoT-based systems. Combines a strong hardware foundation with growing software skills — seeking entry-level Python Backend Developer or IT roles at tech companies.

TECHNICAL SKILLS

Backend: Python, Django Framework, Django REST Framework (DRF), Flask (Basic)

Database: MySQL — schema design, CRUD, JOINs, queries, normalization

Frontend / GUI: Tkinter (GUI development), Basic HTML/CSS

API & Testing: REST API development, Postman, Selenium WebDriver (self-learned)

Python Libraries: Pandas, NumPy, Requests

Tools & Practices: Git, GitHub, OOP concepts, SDLC, Problem-solving, Technical Documentation

Hardware Background: PLC I/O, AutoCAD schematics, Sensors & Actuators, System Validation

EDUCATION & TRAINING

B.E. — Electronics and Communication Engineering

2020 – 2024

Mahendra College of Engineering, Salem, Tamil Nadu

Backend Development Training — Python | Django | MySQL | Tkinter | REST API

Besant Technologies, Chennai

- Completed structured training covering Python OOP, Django framework (models, views, URLs, admin), MySQL database design and queries
- Built backend applications with Django REST Framework, Tkinter GUI projects, and practiced REST API development and testing with Postman

PROFESSIONAL EXPERIENCE

Junior Electrical Engineer (Validation & Testing)

Mar 2025 – Present

Cogent Automation Pvt. Ltd. | Coimbatore, Tamil Nadu

- Performed functional testing and system validation of industrial automation systems prior to commissioning — developing a strong quality-first and testing mindset
- Diagnosed and resolved electrical faults using structured root cause analysis — reduced downtime across 10+ automation setups
- Prepared SOPs, test reports, and validation documentation — built strong technical writing, problem analysis, and reporting skills directly applicable to IT roles
- Worked with PLC I/O signals, sensors, and AutoCAD electrical schematics for debugging and real-time system verification
- Collaborated with cross-functional engineering teams to deliver automation projects on schedule under real-world conditions

Data Science Intern

NullClass | May 2024 – Jul 2024 | Remote

- Built a Real-Time Translation App using Python — integrated translation API, handled real-time input/output, language detection, and exception management
- Performed data validation and preprocessing using Pandas and NumPy; documented findings in structured validation reports

PROJECTS

Real-Time Translation App | *Python | API Integration | Internship Project*

- Developed a Python app that detects input language and translates it in real time using a third-party translation API
- Handled API integration, response parsing, encoding edge cases, and API timeout error handling — demonstrating backend development capability

Smart Poultry Farming — Automated Monitoring & Control System | *IoT | Microcontroller | Final Year Project*

- Designed IoT-based system using sensors and microcontroller to monitor temperature, humidity, and feed levels with real-time alerts
- Programmed automated control of ventilation and feeding based on sensor thresholds, demonstrating end-to-end hardware-software system design

Smart Traffic Management System | *Microcontroller | Sensors | College Project*

- Built an adaptive signal control system using IR/ultrasonic sensors to detect vehicle density and dynamically adjust traffic signal timing
- Implemented emergency vehicle detection module to automatically clear signal pathways

ADDITIONAL INFORMATION

- Willing to relocate anywhere in India for the right opportunity — open to Bangalore, Hyderabad, Chennai, Pune, and NCR
- Strong analytical mindset built through hands-on troubleshooting and validation experience in industrial environments
- Self-motivated learner — independently studied Selenium WebDriver and continuously upskilling in backend development
